ABOUT ME

Senior Full Stack Software Engineer with 4+ years of experience designing, building, and scaling production web and mobile applications. Experienced in end-to-end system development, high-performance API design, scalable architecture, and production deployments using React/Vue + Node.js/Python. Strong focus on system design, performance optimization, code quality, and technical ownership.

TECH STACK

React / Next.js • Vue / Nuxt • React Native • Flutter • Node.js • Django • FastAPI • Go

DEVOPS AND CLOUD

Docker • Kubernetes • GitHub Actions • AWS

SYSTEM DESIGN & ARCHITECTURE

Software Architecture • System Design • API Design • Design Patterns • Distributed Systems • Microservices • Scalability • Performance Optimization

EXPERIENCE

21/02/2025 – 29/11/2025

Full Stack Developer • Haddis Art Technology

- Designed and developed high-performance reporting modules that gave users real-time metrics and data-driven decision-making tools.
- Improved maintainability of the administration dashboard through systematic code reviews, refactoring, and resolving complex database issues.
- Led the investigation and resolution of production incidents, performance bottlenecks, database issues, and deployment failures, driving improvements in system reliability, performance, and operational stability.
- Owned delivery of multiple production features from technical design through deployment while coordinating priorities and resolving implementation blockers.

01/09/2024 – 15/02/2025

Full Stack Developer • Biritu Saving & Credit COOP

- Designed and delivered 50+ production-ready APIs for the mobile application, focusing on performance, reliable data flow, and clear documentation.
- Architected and shipped a high-performance administration dashboard for digital savings and cooperative management, streamlining day-to-day workflows for administrators.
- Built the cross-platform mobile application for Biritu from scratch using React Native and led it through the initial launch.
- Mentored junior engineers and interns, providing guidance on software architecture, API design, code quality, debugging and development practices.

01/2023 – 30/07/2024

Full Stack Developer • Pool Taxi

- Developed robust APIs for a ride-hailing platform that scaled to 20k+ active drivers and passengers, enabling seamless cross-platform mobile integration and real-time data sync.
- Designed integrations with payment gateways, SMS providers, mapping services and third-party APIs.
- Implemented key product features including achievements, spin-and-win lottery, and backup systems.

- Managed deployments to VPS and cloud environments, including feature testing and production bug fixes.
- Designed and optimized backend architecture for core ride-hailing workflows, improving API performance, data reliability, and scalability while supporting seamless integration with cross-platform mobile clients.

01/2022 – 09/2022

Junior Full Stack Developer • Madot Technology

- Designed and implemented backend features including authentication, authorization, and database architecture.
- Built and maintained user interfaces with React.js, Vue.js, Bootstrap, and Tailwind CSS.
- Converted Figma design prototypes into functional, dynamic web components using React and Tailwind CSS.
- Contributed to Logistics Systems and the Lideta Health Science College website through UI improvements and API development.
- Gathered, documented, and maintained software requirements throughout the project lifecycle.

01/01/2023 – CURRENT

Software Engineer • Freelance

- Owned end-to-end delivery of custom software projects, working directly with clients from requirements gathering and technical design through implementation, deployment and production support.
- Resolved critical bugs and shipped feature enhancements across client applications, improving system stability and client satisfaction.
- Designed and developed custom responsive portfolio websites that helped clients professionally showcase their work and personal brands.
- Maintained and contributed to open-source projects on GitHub focusing on clean code, documentation, and reusable components.

PROJECTS

Selected Projects

- **Ride Hailing Platform** – Real-time ride-hailing system supporting 20k+ drivers and passengers
- **Digital Saving System** – Cooperative savings platform with mobile app and admin dashboard
- **Ecommerce Application** – Full-stack e-commerce platform (Open Source)
- **Video Sharing Application** – Full-stack video platform with upload & streaming (Open Source)
- **Doctor & Hospital Rating System** – Review and rating platform for healthcare providers
- **Logistics System** – End-to-end logistics management solution

EDUCATION AND TRAINING

01/10/2018 – 30/07/2023

BSC DEGREE Addis Ababa University

Field of study Computer Engineering
